

Human risk in care

Personnel who are responsible must be trained in a personalised manner.

Conduct human error

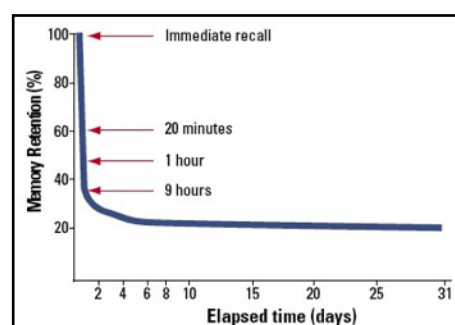

A large proportion of all incidents and accidents are caused by human error. Despite the ever-increasing number of legal requirements and regulations as well as instructions for action, the number has remained constant:

Critical incidents or even accidents in the care sector are also determined by human error.

The human dilemma - the forgetting curve, also known as the Ebbinghausen curve. This curve illustrates the degree of forgetting within a certain period of time. Applied to your employees*, this means that what they have learned that is not applied is lost.

This forgetting leads to fatal consequences in care.

Quality must not be lost

People in need of care have a right to good care - and good care must be recognisable. Good care requires solid knowledge and time on the part of the personnel involved.

How can qualified, efficient, and effective employee training be guaranteed?

In order for qualified, efficient, and effective training to be possible at all, the problem areas must be identified and openly named.

The forgetting as well as a possible lack of knowledge of the employees plays an important role in the problems.

The problems are:

- Information from frontal or face-to-face lessons is only kept for a short time.
- A wealth of information leads to uncertainties.
- Training organizations are cost-intensive and time-consuming.
- Not all employees are reached by all training courses due to absenteeism
- or missing opportunities to participate.
- Knowledge is not queried, so that mistakenly recorded information is retained.
- Training periods only accessible for a limited period of time.

Intelligent learning with ProPilots Care

ProPilots GmbH has developed an individual knowledge management system that comprehensively prepares nursing staff for both everyday and particularly dangerous situations in the nursing sector.

This increases the safety of the personnel in the long term, for example when dealing with medical or technical equipment.

In addition, the system covers all mandatory statutory training courses. The management gains legal certainty in the implementation of the topics and actively contributes to the health and safety of the employees*.

The risk of accidents at work and occupational diseases is significantly reduced, while at the same time improving the quality of knowledge and services. The associated documentation within the individual subject areas ensures compliance with legal requirements.

What do you expect from a learning management system?

First of all, it should reflect your company and your subject areas 100 percent. The individual subject areas in nursing are presented clearly and concisely.

Furthermore, each individual employee* should receive the targeted training and documentation that is essential and important for his/her area.

With the ProPilots knowledge management you yourself can determine in which subject area of the compulsory further training the recurring training and examination is to be accomplished.

By creating user groups (social service, nurse, nursing staff, administration, kitchen staff, etc.) in the respective topic area of the compulsory training, you determine which documents, information and documentation the individual employee receives in his or her area of responsibility. This enables the employee to receive targeted, effective, and efficient training.

Why use a pro-active system from ProPilots?

The ProPilots pro-active knowledge management system integrates your experiences, specifications, and wishes individually.

Nobody knows the necessities better than those responsible. Some of them have decades of experience and are therefore very familiar with the required specialist knowledge.

Once your own information and specifications have been integrated, the system is immediately available to all employees* - at anytime, anywhere in the world and on all common devices.

Open questions, missing information or lack of communication is a thing of the past..

Trust is good, control is better!

How can you monitor the compliance of your employees* with compulsory further training within the statutory deadlines without personnel costs?

Upcoming training and examination intervals are automatically shown to the employee* via email in good time for execution.

Those responsible can view the status of all mandatory training courses for employees* on a daily basis and are additionally informed of expired deadlines by email.

The results achieved by the employees are documented and supplemented with an analysis of weak-points for self-study.

Why e-learning with ProPilots Care?

- Our e-learning platform addresses as many people as possible, explicitly targets adult education and supports lifelong learning.
- The multimedia approach promotes the integration of new knowledge and ensures transfer into the practical world of work.
- The entire e-learning platform is user-friendly and thus promotes the motivation of employees* for acceptance and application.
- An effective learning transfer through the system ensures time savings and cost reduction.

Important!

All personal data is subject to data protection (GDPR) and can only be viewed by the employee*.

Your company gets a real picture

The intelligent system shows all possible deficits transparently and openly, in the form of a "Top Ten" evaluation, structured according to the individual topic areas.

You can see the most frequently incorrectly answered questions in the individual subject areas or user groups here.

Important! Here, too, the personal rights of the individual are taken into account in accordance with data protection regulations (GDPR).

This analysis of all employees* takes on an important function, which ultimately determines the success of your company for the future.

Latent knowledge deficits in the company are only visible at all through the analysis and can be eliminated through additional internal training measures.

Learning from advertising

Information and experiences are retained when they are repeated often enough and are best associated with positive or negative feelings.

Since nobody knows all the information stored, there are always such questions as: "Why could an experienced employee react so wrongly?"

The human being can only work reliably through targeted, recurring training and thus avoid mistakes.

Advertising works!

Recurring advertising changes your subconscious behaviour just like your recurring training.

WE LOOK FORWARD TO MEETING YOU!
